

## The Loudspeaker Stand for Professionals

The Yellow Technology GrandStand™ provides the best possible support for professional loudspeakers, coupled with adjustable height and tilt, to give a stand that allows your loudspeakers to perform to their best.

Proper support is crucial to the effective operation of your loudspeaker. In order to reproduce low frequencies faithfully, your loudspeaker needs to be rigidly supported, otherwise the stand moves with the loudspeaker and softens the punch of the low frequency driver.

At the same time, the loudspeaker cabinet and the stand must be decoupled in order to avoid unwanted resonances and a loss of acoustic energy transferred to the stand.

When searching for suitable stands, it is difficult to find a stand that fulfils both of these requirements but still presents the loudspeakers at the right height and tilt for your studio.

### Rigid Support

The GrandStand™ is completely rigid. Precision-engineered from solid materials and with a sealed, sand-filled base, it simply doesn't move, no matter how high you crank the volume. The loudspeaker itself is gripped to the top plate by a 4mm thick rubber pad.

### Uniquely Adjustable

Stand height is adjustable from 885mm to 1270mm, with optional tilts of 5° and 10°, providing a suitable position for any studio. Industrial levelling feet will adjust to accommodate uneven floors.

### Acoustically Isolated

The top plate of the GrandStand™ is decoupled from the rest of the stand with industrial isolating turrets ensuring that the loudspeaker is acoustically isolated from the column of the stand.

## Specifications

<b>Materials</b>	American White Oak (Solid and Veneers) Moisture-Resistant MDF	<b>Spray Finish</b>	Column: High-Build Polyurethane Clear Lacquer; Base and Top Plate: High-Build Black Polyurethane
<b>Footprint</b>	480mm x 480mm	<b>Top Plate</b>	320mm x 320mm
<b>Height Adjustment</b>	885mm to 1270mm	<b>Weight</b>	90kg each
<b>Tilt Adjustment</b>	0° - 5° - 10°	<b>Price</b>	£850.00 + VAT each
